

If you have a surface repair project you need the breakthrough painting product that will sell itself...

CRAKGON®

Paint it on and the cracks are gone!

WHAT IS IT?

CRAKGON® is a world-class product. It has been specifically designed and developed as a paint reinforcer to permanently repair surface damage both internally and externally. Most importantly it's easy to apply, you simply paint it on and the cracks are gone.

“

We are so impressed with the CRAKGON® product we use to reinforce walls we offer our clients a written 10 year guarantee when it is applied by Bob De Groot Paint Services.

”

WHAT DO YOU USE IT FOR?

CRAKGON® is a problem solver product. Used to repair damaged surfaces it protects the wall and paint system against UV and weathering effects. It also strengthens the wall coating and provides dimensional stability to paint film.

CRAKGON® has been successfully used to eliminate the most common interior and exterior surface problems.

Any surface cracking including:

- Cracked lathe, plaster walls & ceilings
- Cement rendered walls and fences

Moisture related problems including:

- Rising damp
- Mould and mildew
- Corrosion

Paint related issues including:

- Blistering eg: Flaking fascia boards
- Peeling due to poor adhesion
- Chalking
- Efflorescence

WHO USES CRAKGON®?

CRAKGON® is easy to apply and efficiently priced so it's suitable for the DIY and Trade market. The CRAKGON® application technique is always the same, its the complexity of the job that will change, giving it wide market appeal.

Plaster exposed for 10 years with CRAKGON® reinforced paint system

Plaster exposed for 10 years without a reinforced paint system

WE AGE, WE WRINKLE, BUT WALLS STAY YOUNG WITH CRAKGON®.

Start using it and you will never use anything else. Everyone loves its ease of application, outstanding finish and superior performance. It's a product you will want to use over and over again and banish surface problems forever.

HOW DOES IT WORK?

CRAKGON® is a non woven paint reinforcing tissue of randomly dispersed continuous C-glass fibers.

The glass fibers function like the "steel-rod grid in concrete structures", enhancing the durability and, thus preventing cracking of the reinforced paint system. A single layer of CRAKGON® and paint offer an impermeable, highly abrasion resistant, hygienic and long lasting protection barrier. Which, most importantly allows the wall to breathe.

CRAKGON® glass fibers function as the "steel-rod grid in concrete structures"

THE LAB LOVES IT TOO

Laboratory tests prove CRAKGON® prevents the reappearance of surface cracks over 10 years.

Longitudinal tests conducted by the National Building Research Institute of the Council for Scientific & Industrial Research (PRETORIA, South Africa) indicate CRAKGON® delivers outstanding results over a 10-year timeframe.

THE RESULTS

Here are a couple of the conclusions made after ten years exposure of paint systems with and without CRAKGON® reinforcing on a plastered wall displaying severe shrinkage cracking:

1. In all the systems used, the finishes that incorporated CRAKGON® have proved superior to those that did not.
2. While the incorporation of CRAKGON® in a coating system results in more paint being required, the effect is that the system remains satisfactory for a longer period.

Division of Building Technology – CSIR

Loved by master painters, but you don't have to be one to use it.

CRAKGON® COMES IN 4 SIZES TO MEET ALL NEEDS FROM THE HOME HANDYMAN TO THE PROFESSIONAL.

Product	Roll Width	Roll Length	DIY	PRO
CRAKGON® PR	50cm	20m	•	
CRAKGON® PR10	10cm	20m	•	•
CRAKGON® 50	50cm	100m		•
CRAKGON® 100	100cm	100m		•

Note: CRAKGON® will use at least 1/3 more paint depending on the surface texture and roller used.

CRAKGON® IS SAFE AND SIMPLE TO USE IN FIVE EASY STEPS

▶ 1

Prepare the surface on which to apply CRAKGON®, filling major cracks, removing loose or flaking paint and smoothing down.

▶ 2

Surface must be clean, dry and free of dust. Apply horizontal strip of paint at top of surface from which to hang CRAKGON®.

▶ 3

Stick CRAKGON® to wet, painted strip. Ensure that drop is vertical and even. Smooth CRAKGON® against dry surface.

▶ 4

Apply a generous coat of paint through CRAKGON®. This will stick CRAKGON® to the wall. Repeat steps 2 to 4. For best results do not overlap succeeding drops.

▶ 5

After first coat has dried, the fibre pattern of CRAKGON® will be visible. Apply a final coat of paint, which may be of a different quality or another colour if desired.

“

We applied CRAKGON® to repair a badly damaged plaster wall 8 years ago, we returned to do other work on the site recently and found that the repaired wall was in perfect condition but the walls surrounding the repair site were now covered in cracks.

Bob De Groot, Master Painter

”

IT'S HEALTHY TOO

CRAKGON® is not hazardous to health. CRAKGON® is made from continuous monofilament glass fibres exceeding 6 micro metres in diameter, which cannot be inhaled by humans. When handling CRAKGON® no protective clothing is necessary. However, persons with very sensitive skin may experience slight temporary irritation. Should this occur, washing with soap and cold water provides a simple remedy.
